

Fabric BANNERS

Fabric Banners have become one of the most useful forms of brand identification in the recent years. Displayed in retail stores, hanging at sports events and museums, used in point-of-purchase construction, or forming the backdrop of trade show installations, these banners are produced by Digital Sublimation, Screen Printing or Offset Dye Sublimation Printing.

At Screen-Trans, fabric banners produced by these processes are manufactured in our 19,000 sq. ft. Moonachie, NJ plant. By operating a managed control system, consistent color and quality are maintained through the run of each job. Banner projects range in size from 2 inch labels to 50 feet banners, with a maximum unseamed width of 72 inches and with quantities of a single unit on up to orders for thousands. Sizes larger than 72 inches are produced in two or more pieces which are then seamed together in appropriate places. All banners are sewn, finished, packaged and prepared for shipping in-house.

Fabrics available include: polysatin, polypoplin, polysheer, polyduck, spandex, dacron, georgette, polysuede, and polysilk.

Screen-Trans stocks banner stands for counter and floor displays, along with solutions utilizing dowels, string and grommets.
